**Operating Instructions**

ACT 4425
iD Line Filter

The ACT 4425 iD Line Filter is designed to connect between the BLUE and YELLOW data wires and the input terminals of the alarm control panel. The filter allows data to pass through normally but prevents RFI entering the control panel. The ACT 4425 should be fitted to all ID systems, especially on take-overs where existing wiring has been used, to prevent potential false alarms from occuring.

Terminal Connections: BLUE/YELLOW ID line in, BLUE/YELLOW out to panel
